## DETAILED ACTION

### *Claim Objections*

1. Claim 16 is objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claims 4-7, and 10. See MPEP § 608.01(n). Accordingly, the claims 4-7 and 10 not been further treated on the merits.

### *Claim Rejections - 35 USC § 101*

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-16 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 1, 8, and 11 recite a method, respectively. These claims appear to include a judicial exception, namely, an abstract idea. Note that the method steps recite in claims are disclosed by the specification, and claim 16 as computer instructions. Since there are no practical applications claimed, i.e., no physical transformations taken place, nor a useful, concrete and tangible result being produced, the claims are non-statutory.

In order for a claimed invention to accomplish a practical application, it must produce a “useful, concrete and tangible result” *State Street*, 149 F.3d at 1373, 47 USPQ2d at 1601-02 (see MPEP 2106.II.A). A practical application can be achieved through recitation of “a physical transformation outside the computer for which a practical application in the technological arts is either disclosed in the specification or would have been known to a skilled artisan”, or “limited to a practical application within the technological arts” (MPEP 2106 IVB2(b)). Currently, claim \_\_\_\_\_ meets neither of these criteria. In order to for the claimed process to produce a “useful, concrete and tangible” result, recitation of one or more of the following elements is suggested:

Art Unit: 2616

- The manipulation of data that represents a physical object or activity transformed from outside the computer (MPEP 2106 IVB2(b)(i)).
- A recitation of a physical transformations outside the computer, for example in the form of pre or post computer processing activity (MPEP 2106 IVB2(b)(i)).
- A direct recitation of a practical application in the technological arts (MPEP 2106 IVB2(b)(ii)).
